

Table 1 The Extract Class refactoring suggestions for HSQLDB

ifLeafBe(Y/N) represents that if the original class is the leaf node in the inheritance hierarchies; ifLeafBe(Y/N) represents that if the new class is the leaf node in the inheritance hierarchies.

| Extract Class Refactoring         |                               |   |
|-----------------------------------|-------------------------------|---|
| Original Class<br>[ifLeafBe(Y/N)] | Extract Class                 |   |
|                                   | New Class<br>[ifLeafAf(Y/N)]  | Methods/Fields  |
